Abstract

Trillion, trillion, trillion, trillion, trillion, trillion and trillion m particles which have speed 18262500 times faster than speed of light¹ absorbs quanta of energy or quanta of dark energy ($10^{-29}\text{g}/\text{cm}^3$), to make scanning to save new information about our bodies and entire our universe and to copy these information in the form of mass in our six symmetrical universes every 0.5 nanoseconds. This mechanism of how the copy process is carried out in the six symmetrical universes that is really astonishing and incredible than we ever could have imagined in our lives. We are still strong believes that humankind in entire our universe is unique but in reality it is just an illusion. Out there in our six symmetrical universes we have 6 duplicates of our bodies exactly the same as the original. Due to the mechanism of the copy process is carried out in the six symmetrical universes that help us to get a new knowledge that it is possible the tiny dark energy has relation with information about our universe. We understand that quanta of energy ($10^{-29}\text{g}/\text{cm}^3$) or quanta of dark energy is equal to quanta of mass $3, e^{-61}\text{g}$ times square the speed of m particle. In other words, the dark energy is the mass of the information about entire our universe including the mass of the information about our physiologically, psychologically, historically and physically.

M particle absorbs quanta of dark energy $10^{-29}\text{g}/\text{cm}^3$ in entire our universe

Figure 1: Quanta of energy or quanta of dark energy $10^{-29}\text{g}/\text{cm}^3$ absorbs by m particle and carry quanta of mass $3, e^{-61}\text{g}$ at 5 474 959 764 225 000 m/second.

¹ The Holy Quran 70:4

Figure 2: The Hydrogen atom and 6 duplicates of its atom. Its atoms have 1 proton and 6 duplicates of its proton, 1 electron and 6 duplicates of its electron in the six symmetrical universes. Each of the quarks has 6 duplicates in the six symmetrical universes.

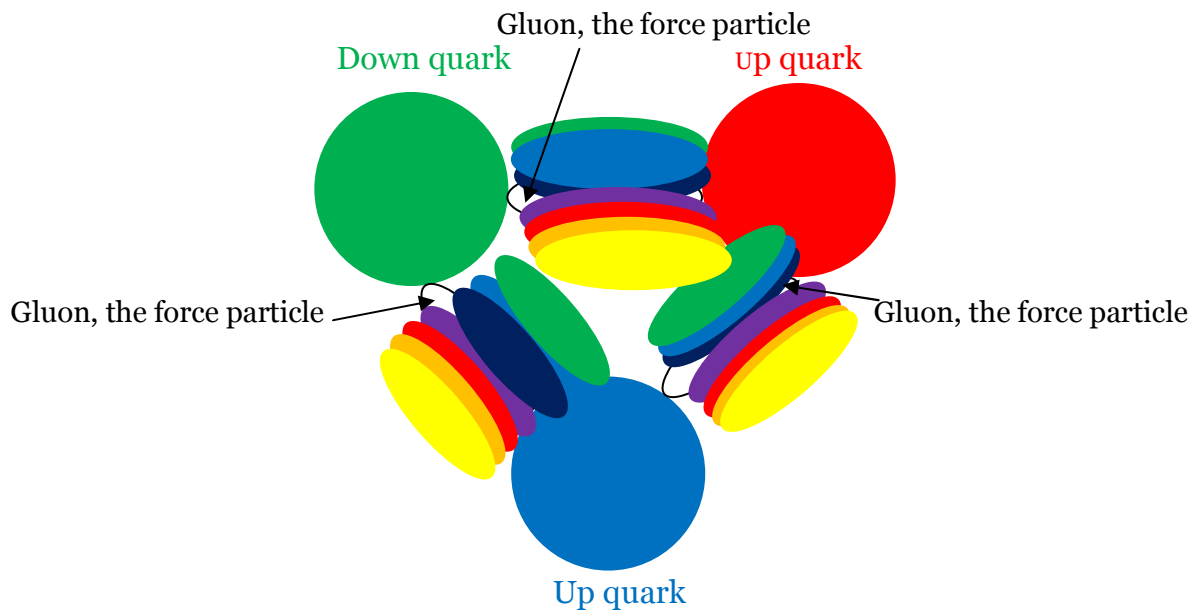

Figure 3: The Quarks within proton and the Gluons (the force-carrier particles) binds the quarks. Each of the Gluons has 6 duplicates in the six symmetrical universes.

Figure 4: A human hair, which is about 25 micrometers thick has 6 duplicates exactly as the original in the six symmetrical universes.

Figure 5: We have 6 duplicates of our bodies exactly the same as the original in the six symmetrical universes.

Figure 6: The animal has 6 duplicates of his bodies exactly the same as the original in the six symmetrical universes.

Our six symmetrical universes exist, surround us and all these universes are invisible

Figure 7: Earth, where we live for millions of years has 6 duplicates exactly as the original in the six symmetrical universes.

Our six symmetrical universes exist and does surround us is really astonishing than we ever could have imagined in our lives. Symmetry universe, Super symmetry universe, Super-super symmetry universe, Super-super-super symmetry universe, Super-super-super-super symmetry universe and Super-super-super-super-super symmetry universe are transparent and that means that all these universes are invisible. It is only our universe that is non-transparent. In these invisible universes there contain dark matter, where light cannot penetrate the dark matter but the light is bent when it is in contact with the dark matter. This dark matter composed of particles smaller than electrons, mass $8, e^{-58}g$, and moving 365250 times faster than the speed of light² and also not interact with ordinary matter. In our six symmetrical universes we have 6 duplicates of entire our universe including our bodies exactly the same as the original.

Figure 8: Entire our universe where the moon, stars, suns, planets, galaxies, galaxy clusters, super galaxy clusters, nebulae, atoms, people, animals, vegetation and all life have their places has 6 duplicates exactly as the original in the six symmetrical universes.

Conclusion

From quarks to entire our universe has 6 duplicates exactly as the original due to the mechanism of the copy process is carried out in the six symmetrical universes. The dark energy is the mass of the information about entire our universe including the mass of the information about our physiologically, psychologically, historically and physically. Dark matter composed of particles smaller than electrons and moving 365250 times faster than the speed of light.
